Post All Stock Levels, Not Just Those With A Scanned Quantity

NOTE: only those items which have actually been scanned will have their stock levels updated in Sage, unless the above box is ticked.

The PC based interface software allows full editing of the scanned Stock Take data prior to posting to Sage.

The stock code, quantity scanned and the current quantity in stock are displayed for comparison, enabling any manual adjustments to be made. The option to save and reload your Stock Take before posting is available to investigate highlighted discrepancies.

The main screen facilitates uploading of the Product File to the hand held terminal. It also receives the captured data from both the Stock Take and Goods In / Out adjustments.

Confirmation of postings are displayed and automatically stored in the audit trail. All current settings are displayed for easy reference at the bottom of the window.

Product Features

Links directly with SAGE 50/100 MMS and bespoke CSV files.

Downloads Product File for Stock Referencing.

Switchable stock referencing

Full editing facility of Stock Take before posting to Sage

Full audit trail facility.

Ability to save your Stock Take data to a file prior to posting.

Product Information

Q-data Software

	Price	Cover P/A
Q-data stocktaking and goods in/out adjustments software	£500.00	£100.00
Q-data+ stocktaking and goods in/out adjustments software	£750.00	£150.00

Please note, the above Q-data+ products require an additional bar code table in order to reference alternative or manufacturers bar codes. This can be in the form of Q-scan+ or Q-plus as detailed below.

Optional Bar Code Referencing.

All scanning products from Q-tron come in two variants. In their standard form they will only scan bar coded representations of Sage Product Codes. In their *plus* (+) form each Sage Product Code can be linked to a bar code table containing alternative bar codes. Therefore if an alternative code is scanned, the data is converted into its corresponding Sage Product Code.

Q-plus software contains the bar code table for use with Q-products where multiple alternative or manufacturers bar code numbers need to be referenced against a Sage Product Code. It allows the manual input of bar codes data.

	Price	Cover
Q-plus Software with Interface to Sage	£290.00	£87.50

- These products include 30 days telephone installation support only. Full software support and update cover is available as an option. Standard cover is from 09:00 to 17:00 Monday to Friday excluding Bank Holidays. Additional cover is available on request.
- Modifications to these products can be made to suit individual requirements.

Data Capture Units

The Denso 300 & 8000 models incorporate a high quality distance CCD scanner, capable of scanning bar codes in excess of 200mm in width. They are lightweight, easy to use and are equipped with a back lit LED display.

Care should be taken when ordering the data capture unit, as each of the models will accommodate different amounts of Customer or Product information. Our sales staff will be happy to advise on the appropriate unit

	Price
Denso D8000 Data Capture Unit with barcode reader	£975.00
Denso D8000 download cradle with battery charger	£299.00
Denso D300 Data Capture Unit with barcode reader	£995.00
Denso D300 download cradle with battery charger	£299.00

- Units are supplied with RS232 download cable, optional download cradle and battery chargers are available.
- Hardware cover is optional, prices available on request.

All of the above prices are subject to VAT and delivery.

Q-tron reserves the right to alter Product specification without notice.
